

### **Listing of Claims:**

This listing of claims will replace all prior versions and listings of claims in the application:

1. (Previously Presented) A method for accessing network  
5 data associated with a document, comprising:

converting at least a portion of said document to  
electronic format with a digital capture input device, the  
at least a portion of said document having one or more  
indicia thereon, the digital capture input device being  
10 operatively associated with a network;

analyzing the at least a portion of said document in  
electronic format to obtain said one or more indicia;

using said one or more indicia to locate said network  
data, said network data not including said document, said  
15 network data being maintained at another device operatively  
associated with the network; and

automatically accessing said network data.

2. (Original) The method of claim 1, wherein said one or  
more indicia comprises at least a portion of the text on the at  
20 least a portion of said document.

3. (Original) The method of claim 1, further comprising:  
providing the at least a portion of said document with  
one or more tags before the at least a portion of said  
document is converted to electronic format with said  
25 digital capture input device;

analyzing the at least a portion of said document in  
electronic format to obtain said one or more tags; and

using said one or more tags to locate said network  
data.

4. (Original) The method of claim 3, wherein said one or  
more tags comprise machine-readable data.

5. (Original) The method of claim 1, wherein accessing said network data comprises receiving said network data at said digital capture input device.

6. (Original) The method of claim 5, further comprising displaying at least a portion of said network data on display apparatus operatively associated with said digital capture input device.

7. (Original) The method of claim 5, further comprising printing at least a portion of said network data on printer apparatus operatively associated with said digital capture input device.

8. (Original) The method of claim 1, wherein accessing said network data comprises receiving said network data at an email account.

9. (Original) The method of claim 1, wherein accessing said network data comprises receiving said network data at a network device.

10. (Original) The method of claim 1, wherein accessing said network data comprises displaying at least a portion of said network data.

11. (Original) The method of claim 1, further comprising sending the at least a portion of said document in electronic format from said digital capture input device to said another device.

12. (Original) The method of claim 1, wherein analyzing the at least a portion of said document in electronic format to obtain said one or more indicia comprises using character recognition to obtain said one or more indicia.

13. (Original) The method of claim 1, wherein said one or more indicia comprises one or more words, and wherein using said one or more indicia to locate said network data comprises:

5       determining a frequency for each of said one or more words;

      comparing the frequencies of said one or more words with a word frequency list; and

      using the results of said frequency comparison to locate said network data.

10       14. (Original) The method of claim 1, wherein said digital capture input device is a multifunction device.

15       15. (Previously Presented) Apparatus for accessing network data associated with a document, comprising:

      one or more computer readable storage media; and

15       computer readable program code stored on said one or more computer readable storage media, said computer readable program code comprising:

20       program code for analyzing at least a portion of said document to obtain one or more indicia from the at least a portion of said document after the at least a portion of said document has been converted to electronic format with a digital capture input device operatively associated with a network;

25       program code for using said one or more indicia to locate said network data, said network data not including said document, said network data being maintained at another device operatively associated with the network; and

      program code for automatically accessing said network data.

30       16. (Original) The apparatus of claim 15, wherein said digital capture input device is a multifunction device.

17. (Original) The apparatus of claim 15, wherein said one or more indicia comprises at least a portion of the text on the at least a portion of said document.

18. (Original) The apparatus of claim 15, further comprising one or more tags provided on the at least a portion of said document; and wherein said computer readable program code further comprises:

program code for analyzing the at least a portion of said document in electronic format to obtain said one or more tags; and

program code for using said one or more tags to locate said network data.

19. (Original) The apparatus of claim 18, wherein said one or more tags comprise machine-readable data.

20. (Original) The apparatus of claim 15, wherein said program code for accessing said network data comprises program code for receiving said network data at said digital capture input device.

21. (Original) The apparatus of claim 20, wherein said computer readable program code further comprises program code for displaying at least a portion of said network data on display apparatus operatively associated with said digital capture input device.

22. (Original) The apparatus of claim 20, wherein said computer readable program code further comprises program code for printing at least a portion of said network data on printer apparatus operatively associated with said digital capture input device.

23. (Original) The apparatus of claim 15, wherein said

program code for accessing said network data comprises program code for sending said network data to an email account.

24. (Original) The apparatus of claim 15, wherein said program code for accessing said network data comprises program code for sending said network data to a network device.

25. (Original) The apparatus of claim 15, wherein said program code for accessing said network data comprises program code for displaying at least a portion of said network data.

26. (Original) The apparatus of claim 15, wherein said computer readable program code further comprises program code for sending the at least a portion of said document in electronic format from said digital input capture device to said another device.

27. (Original) The apparatus of claim 15, wherein said program code for analyzing the at least a portion of said document in electronic format to obtain said one or more indicia comprises program code for using character recognition to obtain said one or more indicia.

28. (Original) The apparatus of claim 15, wherein said one or more indicia comprises one or more words, and wherein said program code for using said one or more indicia to locate said network data comprises:

program code for determining a frequency for each of said one or more words;

program code for comparing the frequencies of said one or more words with a word frequency list; and

program code for using the results of said frequency comparison to locate said network data.

29. (Previously Presented) A system for accessing network

data associated with a document, comprising:

a digital capture input device operatively associated with a network, said digital capture input device converting at least a portion of said document to electronic format, the at least a portion of said document having one or more indicia thereon;

one or more computer readable storage media;

computer readable program code stored on said one or more computer readable storage media, said computer readable program code comprising:

program code for analyzing the at least a portion of said document in electronic format to obtain said one or more indicia;

program code for using said one or more indicia to locate said network data, said network data not including said document, said network data being maintained at another device operatively associated with the network; and

program code for automatically receiving said network data at said digital capture input device.

30. (Original) The system of claim 29, wherein said digital capture input device is a multifunction device.

31. (Original) The system of claim 29, wherein said one or more indicia comprises at least a portion of the text on the at least a portion of said document.

32. (Original) The system of claim 29, further comprising one or more tags provided on the at least a portion of said document; and wherein said computer readable program code further comprises:

program code for analyzing the at least a portion of said document in electronic format to obtain said one or more tags; and

program code for using said one or more tags to locate

said network data.

33. (Original) The system of claim 32, wherein said one or more tags comprise machine-readable data.

34. (Previously Presented) Apparatus for accessing network data associated with a document, comprising:

means for converting at least a portion of said document to electronic format, said means being operatively associated with a network, the at least a portion of said document having means for locating said network data;

means for analyzing the at least a portion of said document in electronic format to obtain said means for locating said network data;

means for using said means for locating said network data to locate said network data, said network data not including said document, said network data being maintained at another device connected to the network; and

means for automatically accessing said network data.
